This worksheet should be completed as specified in Section III of the Weatherization Assistance Program Application Package.

V.1 Eligibility

V.1.1 Approach to Determining Client Eligibility

Provide a description of the definition of income used to determine eligibility:

Definition of income used to determine eligibility:

A dwelling unit shall be eligible for weatherization assistance under this part if it is occupied by a family unit whose income is at or below 200% of the poverty level determined in accordance with criteria established by the Director of the Office of Management and Budget. An individual or family unit whose income is at or below 200% of the poverty level, contains a member who has received cash assistance payments under Title IV or XVI of the Social Security Act or applicable State or local law at any time during the 12 month period preceding the determination of eligibility for weatherization assistance.

The 2017 US Census American Community Survey 1 year estimates identified 171,275 households in the state with incomes at or below 200% of the poverty level, the WAP eligibility income limit. These households represent 22% of the state's population of households.

Additionally, the 2017 US Census American Community Survey provides other significant findings about persons with incomes at or below the 200% poverty level:

- 238,687 households have 1 or more people under 18 years of age;
- Approximately 47,700 households contained children that were under 6 years of age;

From 2017 US Census American Community Survey regardless of poverty status:

- The number of dwelling units in which elderly reside was estimated at 231,889;
- The number of dwelling units in which people with disabilities reside was estimated at 308,280.

To be eligible for New Mexico Weatherization Assistance Program services, clients must meet the income criteria outlined in 10 CFR 440.22 or meet a minimum of one of the following criteria as outlined in WPN 19-3:

- Have a gross household income (total annual cash receipts) at or below 200% of the federal poverty level as established by the Director of the Office of Management and Budget (OMB);
- Receive cash assistance payments under Title IV or Title XVI of the Social Security Act or in accordance with applicable State or local law, at any time during the past five years preceding the determination of eligibility. Acceptable programs include:
  a. Temporary Aid to Needy Families (TANF)
  b. Supplemental Security Income (SSI)
  c. Social Security Disability Insurance (SSDI)
  d. Aid to Needy Disabled (AND)
  e. Old Age Pension (OAP)
  f. Supplemental Nutrition Assistance Program (SNAP)

Describe what household eligibility basis will be used in the Program

Eligibility Basis

Before a home is qualified for weatherization, the client must be approved. This approval process begins with receipt of an application. A NM Energy$mart intake staff member reviews applications to ensure that household qualifies for the program. A household will not be qualified unless the following items are provided for the file.

- A completed application
- Income verification a criteria listed in WPN 19-4
- Proof of ownership and or landlord sign off
- A current utility bill for gas & electric service
Proof of income may be in the form of:

- Documented verification from income sources
- Current income tax return
- Copies of pay checks or check stubs

Proof of ownership may be in the form of:

- Evidence of mortgage payments
- Property deeds or proof of tax payment

For renters, rental agreements from landlords must be obtained and accompanied with a landlord agreement. Intake staff also reviews the documentation for demographic information such as:

- Proper identification of head of household
- Other household members are identified as applicable for disability or child status
- Proof of disability (Medical documentation is requested to ascertain disability status)

Eligibility dates are updated in the MFA online system annually even if the client is on the waiting list.

Income is re-certified by the Subgrantees annually even if the client is on the waiting list. (WP18.3)

Re-weatherization: Homes weatherized on or before September 30, 1994 may be re-weatherized, however homes that have never been weatherized will be prioritized over homes that have been previously weatherized.

Notification:

Applicants are immediately notified of their eligibility status. Ineligible applicants are notified in writing, stating the reason for ineligibility.

Client Appeals Policy:

All Subgrantees shall establish and maintain a policy allowing a client to appeal a denial of service. The policy must be part of the agency’s weatherization program manual. In addition, the agency must post the policy on the agency’s website, so clients have access to submit a formal appeal for denial of services. The policy must clearly state how the client can initiate the appeal, who will make the determination and the timeline for review.

Steps that should be part of Subgrantee’s policy include:

When the agency defers a unit or otherwise denies a client weatherization services, the agency must transmit a formal letter to the client indicating the specific reason(s) for the denial.

If an appeal is received, the agency should have a minimum of a 1 tier review of the client’s application by a staff member in the organization with a supervisory position in the agency hierarchy. The staff member reviewing the appeal must be someone other than the agency staff who made the initial decision to deny the client services. The individual must also be familiar with the regulations regarding eligibility.

The person reviewing the appeal should compare the provisions of the relevant regulation(s) to the application, speak to the agency staff involved in the initial denial, and speak to the client before making a decision.

If a determination is made that the original determination was correct, a formal letter must be sent to the client outlining the determination of the appeal and once again articulating why services were denied. The letter should include the process that took place to confirm the denial.

If the person reviewing the appeal determines the appeal is granted, the client should be provided a letter stating such and detailing when their home will be weatherized. The letter should include the process that took place to confirm the approval.

Describe the process for ensuring qualified aliens are eligible for weatherization benefits

MFA requires Subgrantees to collect proof of a social security number/Identity for at least one adult living in the residence. If a social security number is not available for the remaining members of the household, we require a Non-Citizen Immigrant Status for all other members of the household. Immigrants are eligible under the current law referenced on the U.S. Department of Health and Human Services website.

http://aspe.hhs.gov/hsp/immigration/restrictions-sum.shtml. In addition, we require a birthdate be provided. The Subgrantee passes the information through our on-line system which has a secure server where the information is encoded. All data is redacted after it has been put into our online system. Our online system scrambles the data for protection of the client.
V.1.2 Approach to Determining Building Eligibility

Procedures to determine that units weatherized have eligibility documentation

A dwelling unit is eligible for weatherization assistance if it is occupied by a household whose total income is at or below 200 percent of the poverty income level or if the household contains a member who has received SSI for disability or TANF at any time during the 12-month period preceding the determination of eligibility for weatherization assistance.

In addition, the client must have evidence of mortgage payment, property deed or proof of tax payment to be qualified. For renters, rental agreements from landlords must be obtained and accompanied with a landlord agreement. Both of these documents must be kept in the client file and verified upon monitoring or Quality Control Inspections.

Describe Reweatherization compliance

Re-Weatherization

New Mexico does not encourage re-weatherization of homes however if an individual applies for weatherization and their home had been weatherized prior to September 30, 1994 we will allow re-weatherization under the below conditions.

- The Subgrantee must determine that the applicant is eligible
- A DOE approved energy audit must be run on the home
- All health and safety issues must be addressed
- When applicable we use leverage funding instead of DOE funding for any measure that qualifies

Households located in a disaster area would be considered as priorities for weatherization as long as the households are eligible and meet one of the priorities established in regulation and are free and clear of any insurance claim resulting from damage incurred from the disaster.

Describe what structures are eligible for weatherization

Eligible Structures

Housing types qualifying for weatherization include single family, multi-family, and mobile homes.

A dwelling unit is eligible for weatherization assistance if it is occupied by a family whose income is at or below 200 percent of the poverty level, contains a member who has received SSI or TANF at any time during the 12-month period preceding the determination of eligibility for weatherization assistance, or is eligible for assistance under the Low Income Home Energy Assistance Act of 1981.

Non-traditional dwelling units such as shelters or dwelling units sharing a wall with a business will be discussed with the DOE project officer prior to commencement of the project and full caution will be exercised to be sure the particular units are eligible. Weatherization of non-stationary campers and trailers that do not have a mailing address associated with the eligible applicant are not eligible and will not be allowed.

Buildings should be deferred if they have a deficiency in their structure or condition that makes it impractical to weatherize effectively. If the area is known to have redevelopment plans then weatherization will be deferred until development is complete. Health and safety issues requiring more than what is allowed by WPN 17-7, or the current Health and Safety Plan will be deferred.

All site built units 45 years old or older will need SHPO clearance and receive approval prior to weatherization.

Describe how Rental Units/Multifamily Buildings will be addressed

Rental Units

Single Family Rental Units
U.S. Department of Energy
WEATHERIZATION ASSISTANCE PROGRAM (WAP)
STATE PLAN/MASTER FILE WORKSHEET
(Grant Number: EE0007937, State: NM, Program Year: 2019)

Single family rental units qualify for weatherization as long as the clients that are housed in the property qualify for weatherization. The owner/agent must agree to the weatherization, commit to a contribution of 20% of the weatherization materials and sign a waiver stating that they will not raise the rent on the single family unit for a minimum of 1 year unless those increases are related to matters other than the weatherization work performed.

Subgrantees must ensure that single family rentals follow the five points below:

1. Benefits or the services accrue primarily to the low income tenants;
2. The tenants have a way to complain if they feel that the rent has increased as a result of these services and the landlords provide a statement notifying tenants of this procedure;
3. No undue or excessive enhancement shall occur to the dwelling unit;
4. Permission of the building owners are always obtained before commencing work;
5. Rent may not be increased for a minimum of one year unless increases are related to matters other than weatherization work, and a signed statement from the owner stating the above is obtained.

Single Family Rental units qualify for weatherization as long as the landlord agrees to the weatherization and signs a waiver stating that they will not raise the rent on the units for a minimum of 1 year unless those increases are related to matters other than the weatherization work performed.

To ensure that no undue or excessive enhancements are made to the home, a NEAT or MHEA audit must be run on the home prior to the scope of work being outlined.

The necessary steps that must be taken to ensure proper documentation for weatherizing a single family rental unit include:

- An application must be fully filled out by the client;
- Proof of income must be provided;
- Proof of a lease must be obtained;
- Current copies of the clients gas and electric bills must be obtained;
- Written permission must be obtained from the landlord/agent;
- Subgrantee must obtain certification from the landlord that the rent of the property will remain the same for at least one year following performance of weatherization work;
- MFA will monitor compliance with this policy only to the extent that the 5% to 10% sample monitoring method MFA employs to verify compliance will include rental Projects weatherized through the Program.

Multifamily Rental Units

Multifamily Rental units qualify for weatherization as long as the clients that are housed in the property qualify for weatherization. The owner/agent must agree to the weatherization, commit to a contribution of 20% of the weatherization materials and sign a waiver stating that they will not raise the rent on the units for a minimum of 1 year unless those increases are related to matters other than the weatherization work performed.

To ensure that no undue or excessive enhancements are made to the unit, a TREAT or NEAT audit, depending on the building structure must be run on the complex prior to the scope of work being outlined.

The necessary steps that must be taken to ensure proper documentation for weatherizing a multifamily rental unit include:

- Obtain the written permission of the owner or his agent;
- Verify that not less than 66 percent (50 percent for duplexes and four-unit buildings, and certain eligible types of large multi-family buildings) of the dwelling units in the building are eligible dwelling units, or will become eligible dwelling units within 180 days;
- Ensure that the benefits of weatherization assistance in connection with such rental units including units where the tenants pay for their energy through their rent, will accrue primarily to the low-income tenants residing in such units;
- By way of use of the audit, Subgrantee must make certain that no undue or excessive enhancements are made to the units;
- Completed applications must be obtained from each of the clients in the rental units; and
- Current copies of Gas and Electric bills must be obtained from each of the rental units or supplied by the management.
- Multifamily audit process is followed that includes detailed scope of work, photos, and regular meetings between MFA, Subgrantee, and multifamily building management or owners.

Once the information above is in place, an approval request, in the form of an approved energy audit must be submitted to MFA in order to weatherize multifamily units larger than a 4-plex. A description of the process that determined the measures being installed must be provided with the audit.

Procedures for Owner Contributions are as follows:

- A 20% cash contribution commitment of the weatherization materials are required from the Owner prior to commencement of the Weatherization Project. The Owner contribution is based on the estimated costs from the energy audit.
Describe the deferral Process

Deferral Process

There are some situations in which an agency or contractor should not, or may choose not to, weatherize an otherwise eligible unit. In order to deal with such cases, MFA implements the deferral policy for all agencies administering the NM EnergySmart Program. This policy allows weatherization staff to defer services when certain conditions or circumstances exist. Under no circumstances will partial weatherization be allowed. All units reported must be inspected by a Quality Control Inspection (QCI) and determined to be complete. Deferral is allowed under certain conditions; however, an agency should define its intentions at the time a condition occurs. The agency/contractor deferral policy must contain these elements:

Deferral of weatherization services - An agency or contractor may postpone weatherization services under the following conditions:

- A dwelling unit is vacant.
- A dwelling unit is for sale.
- A dwelling unit is scheduled for demolition.
- A dwelling proves to be dilapidated or structurally unsafe and unsuitable. Dilapidated units are classified as those which do not provide decent, safe, and sanitary shelter in their present state and have defects so serious and numerous that the repairs required to revive the structure to standard condition would not be economically feasible.
- A dwelling unit is deemed by the auditor to pose a threat to the health or safety of the crew or contractor.
- A mobile home is improperly installed (for example, without adequate supports).
- A dwelling unit is uninhabitable (for example, a burned-out apartment).
- A building is affected by mold and mildew and the area affected is too large for the weatherization crew or contractor to remediate.
- The client is uncooperative with the weatherization agency or its contracted agent, either in demanding that certain work be done, refusing higher priority work which is needed, being abusive to the work crew or contractor, or by being unreasonable in allowing access to the unit. Every attempt should be made to explain the program and the benefits of the work. If this fails, work should be suspended and the MFA should be consulted. In such cases, documentation is required.
- Obvious discrepancies are found between the information supplied by the client on the application and observed conditions at the time of weatherization. The agency or contractor must resolve these discrepancies before weatherization work can continue.
- If, at any time prior to the beginning of work (work officially begins when the audit is performed), the agency or contractor determines that the client is no longer eligible, or personnel believe that circumstances may have changed, the unit shall not be weatherized until updated information can be obtained from the client.
- The dwelling unit or parts thereof are being remodeled and weatherization work is not coordinated with a housing rehabilitation program.
- The eligible household moves from the dwelling unit where weatherization activities and services are in progress. In such a case, the agency or contractor must determine whether to complete the work, and the circumstances must be documented in the client file.

There are health or safety hazards that must be corrected before weatherization services may begin including, but not limited to:

- The presence of animal feces and/or other excrement.
- There are rats, bats, roaches, reptiles or insects present that could cause harm to the crew or other animals or varmints that are not properly contained on the premises.
- Loose dogs
- Disconnected waste water pipes.
- Hazardous electrical wiring.
- The presence of unsafe levels of mold or mildew.
- Unvented combustion appliances or actionable levels of ambient carbon monoxide.
There are illegal drugs or illegal activities occurring on the premises;
The client or owner is physically or verbally abusive to any personnel;
One or more occupants in a dwelling have been diagnosed with a contagious and life-threatening disease;
When a person’s health may be at risk and/or the work activities could constitute a health and safety hazard, the occupant at risk will be required to take appropriate action based on the severity of the risk.

Failure or the inability to take appropriate actions must result in deferral of the weatherization work.
In unusual situations not covered above or where other problems of a unique nature exist, MFA should be consulted.

Procedure:
If an agency or contractor cannot, or chooses not to weatherize a dwelling unit, it must notify the client or owner/authorized agent by use of the Deferral of Services Form which should include:

- The nature and extent of the problem(s) and how the problem(s) relate(s) to the determination not to weatherize the unit;
- Any corrective action required before weatherization services can be initiated;
- A time limit for correcting problems so that weatherization services may be rescheduled, agencies must send the date of anticipated follow-up in writing to MFA;
- The name of the person or entity responsible for correcting the problem(s);
- The right of appeal;
- All documentation justifying the decision to defer services must be kept in the client file;

Agencies must also keep an updated spreadsheet to track all referrals and deferrals.

V.1.3 Definition of Children
Definition of children (below age): 19

V.1.4 Approach to Tribal Organizations
☐ Recommend tribal organization(s) be treated as local applicant?
If YES, Recommendation. If NO, Statement that assistance to low-income tribe members and other low-income persons is equal.

Low-income members of an Indian Tribe are eligible to apply for services under this plan. MFA has a staff member dedicated to Indian Housing issues who has been instrumental in our program weatherizing more homes on native lands. Low income members of an Indian tribe will receive benefits equivalent to the assistance provided to other low-income persons within the state.

V.2 Selection of Areas to Be Served

The NM EnergySMART Program is a statewide program serving the 33 counties of New Mexico:
San Juan; McKinley; Cibola; Rio Arriba; Taos; Colfax; Los Alamos; Santa Fe; Mora; San Miguel; Union; Harding; Quay; Curry; Guadalupe; DeBaca; Roosevelt; Sandoval; Bernalillo; Valencia; Torrance; Catron; Grant; Hidalgo; Luna; Socorro; Sierra; Dona Ana; Lincoln; Chavez; Otero; Eddy; Lea.

The Program also serves the Pueblos of Zuni, Acoma, Laguna, Santa Clara, Oglala Owingeh, Taos, Picuris, Nambe, Tesuque, Pojoaque, Cochiti, Isleta, Jemez, San Felipe, San Ildefonso, Sandia, Santa Ana, Santo Domingo, Zia, Jicarilla Apache Reservation, and the Mescalero Apache Reservation.

The 2017 US Census American Community Survey was used to compile the data used for the distribution formula. The funding allocations for each county and pueblo are based on the number of households with elderly, young children, disabled and low income occupants, weighted by heating degree days, and follows a similar method as the 10 CFR 440.10 describes for state allocations. The above at risk population segments are averaged with the amount of low income households to determine the allocations for each county and pueblo.

DOE, LIHEAP and State funds will be allocated statewide. Utility funds will be allocated to the areas served by the participating utility companies.

V.3 Priorities
Subgrantees will be required to disseminate information to the general public about the availability of services within 30 days of receipt of the contractual agreement and shall retain proof of such dissemination in their records.

Subgrantees are required to update the waiting lists annually to include written notification to individuals on the waiting list to determine if they still desire services. Updating will allow the Subgrantees to identify the higher-ranking clients regardless of the amount of time on the waiting lists.

Priority among eligible applicants for the receipt of NM Energy$mart services is established by the NM Energy$mart Online system, which follows the requirements specified in CFR 440.16 (b). Priority is given to identifying and providing weatherization assistance to:

1. Elderly persons (a person who is 60 years of age or older);
2. Persons with disabilities;
3. Families with children (households with dependents not exceeding 18 years of age);
4. Households with high energy burden.

V.4 Type of Weatherization Work to Be Done

V.4.1 Technical Guides and Materials

The NM Energy$mart Program is committed to full compliance with 10 CFR 440.21(i) and WPN 15-4 for energy audit procedures. All installations are using materials that are listed in Appendix A of 10 CFR 440.

The NM Energy$mart Program has approached the goal of meeting the specifications, desired outcomes, and objectives of the Standard Work Specifications (SWS) with several successful methods. Our Subgrantees have been in the practice of utilizing the SWS as full implementation since PY 2014. Below is a list of manuals and guides with dates of issue. Each of these has been uploaded with the State Plan in addition to the links provided below.

  - Re-issued 03/04/2019, updated 02/28/2019
  - Re-issued 03/04/19, updated 02/28/19
- Field Guide Deck of Cards
  - Issued 02/23/2018, updated 02/23/2018

There are five ways the documents are made available to our Subgrantees:

1. The Administrative Manual and Technical Standards are available to our Subgrantees and the general public on our website, [www.housingnm.org](http://www.housingnm.org)
2. We communicate with our Subgrantees on a regular basis referencing the necessary materials. This communication is either triggered by an email, question, conversation, new information or monitoring.
3. Technical Committee calls are held monthly. During these calls, the Technical Standards and SWS may be discussed with challenges, successes, and innovative approaches to compliance. The attendees for these meetings are the energy auditors, program managers, Quality Control Inspectors and the Energy Smart Academy.
4. During any WAP RFP process, the links to the manuals are provided with the RFP package.
5. Subgrantee use of the documents are verified through the monitoring process.

All of the existing contracts that the NM Energy$mart Program has with our Subgrantees references compliance to the SWS. The contracts contain the following statement:

Subgrantees will be responsible for providing services as required by the Department of Energy (DOE) Standard Work Specifications (SWS). The SWS requirements for Single family homes & Manufactured housing can be accessed at [https://sws.nrel.gov](https://sws.nrel.gov). If these specifications are not followed, payment will not be made.

Our Subgrantees have also incorporated language in their contracts with their subcontractors requiring compliance to the SWS. All of the contracts between any entities using WAP funds have signatures from both parties verifying acknowledgement of the aforementioned expectations.

V.4.2 Energy Audit Procedures

Audit Procedures and Dates Most Recently Approved by DOE

Audit Procedure: Single-Family
Audit Name: NEAT
Approval Date: 10/7/2013

Audit Procedure: Manufactured Housing
Audit Name: MHEA
Approval Date: 10/7/2013

Audit Procedure: Multi-Family
Audit Name: TREAT
Approval Date: 10/20/2017

Comments

The dates in the table above are entered by DOE however it is important to note that New Mexico’s NEAT and MHEA single family audit procedures were updated and approved by DOE on November 7, 2018.

This section summarizes the protocol that is detailed in the single family and multifamily energy audit procedures submitted with the energy audit review packages.

1. Pre-visit planning and desk viewing.
2. A certified energy auditor performs an in-person meeting, including client education, and completes a full building screening for weatherization viability and hazards.
3. Thorough exterior envelope inspection for SWS requirements, Health and Safety, TREAT, NEAT or MHEA entry, and BPI standards.
4. Interior inspection for data entry, Health and Safety, lead tests, baseload usage measures (lighting, refrigeration, etc.), number and location of appliances, and diagnostic testing arrangements.
5. Diagnostic tests are performed on all required appliances for efficiency, safety, and operating condition outlined in the NM Energy $mart Technical Standards.
6. Blower door testing procedures are performed including air leakage and barrier assessments, zonal tests, ASHRAE 62.2-2016 determinations, and duct leakage tests.
7. Final walk through with recap on client education, double check on field notes, pilot lights, house condition, additional tests if needed.
8. All information is reviewed and entered into energy audit software. This includes verifying input reports against actual notes, comparing audit results with preliminary scope of work, review of measure and SIR ranking, incidental repair and health and safety items.

In the event that potentially dangerous friable materials (e.g. Lead-based paint dust, disturbed asbestos, or hazardous organic materials such as mold, may become air-borne due to depressurization testing, any testing requiring the use of a blower door may be omitted. Such conditions must be documented including photographs, and included in the unit file. For the purposes of energy auditing and air-sealing specification, the energy auditor will assume a .5 cfm/50sqft of exposed envelope area.

To ensure eligible occupants of multi-family housing will receive cost effective weatherization services, each weatherized unit will have a computerized energy audit which complies with 10 CFR 440.21(b) completed prior to the installation of any weatherization measures. This energy audit will be included in each unit file. For single-family units, a NEAT audit will be completed. For mobile home units, a MHEA or if the mobile home is structured more like a site built unit, a NEAT audit will be completed. Multi-family units may be audited using TREAT, or with prior written permission for specific types of multifamily buildings that are up to 25 units individually heated and cooled, a NEAT audit may be completed.

V.4.3 Final Inspection
Subgrantee's may not report a dwelling as having been weatherized until all weatherization materials identified for installation at said dwelling have been installed and the Subgrantee, or authorized representative, has performed a final inspection(s) of said dwelling, including any mechanical work performed, and certified that the work has been completed in a workmanlike manner and in accordance with the priority determined by the audit procedures required by 10 CFR 440.21. All final inspections will meet the requirements of the Standard Work Specifications (SWS), Technical Standards, and the NM Field Guide. Local code requirements for mechanical appliance installation are included.

All Subgrantee's final inspections will continue to be performed by a certified Quality Control Inspector (QCI) independent from the initiation of the work order, assessment, or work completed. As of the time of this application, our Subgrantees all have certified QCI on staff. The NM Energy $mart Program is pursuing more QCI Inspectors in each agency as well as at least one more inspector for a third agency, continued Comprehensive education for review, recertification, multi-family QCI, and the additional Energy Auditor requirement for the existing individuals that hold those certifications.

The Subgrantee must verify that all weatherization materials identified for installation at the particular dwelling have been installed in a workman-like manner and in accordance with the priority determined by the auditing procedure as required by 10 CFR 440.21, meet the requirements of SWS, Scope of Work, and our Field Guides prior to reporting the completed unit. Said verification must include, at a minimum, the following verifications and tests:

1. Assessment of the original audit, work order, and file;
2. All weatherization measures installed by agency's crew(s);
3. All mechanical work performed, including verification of new equipment size and rating;
4. All weatherization measures installed by outside contractors;
5. CAZ Depressurization Check (BPI Protocol);
6. Post-Retrofit Blower Door Depressurization Test, Zone Pressure Diagnostics (See Energy Audit Section for more detail); Minimum Ventilation Compliance Verification
7. If Duct-sealing was performed:
   a. Worse-case depressurization test with air handler on and off;
   b. Pressure Pan Testing;
   c. System Balance Testing (maximum 3pa pressurization);
   d. Visual Inspection
8. If Mechanical Ventilation has been installed, then the inspector shall verify continuous and peak flow output of the unit through Flow Hood Testing. NOTE: For HRV/ERV installations which use the central supply and return ductwork, Flow Hood Tests may be required at all supply and return register locations. All mechanical ventilation must comply with ASHRAE 62.2 2016;
9. Client satisfaction interview and dialogue
10. Visual inspection of all work completed
11. Detailed and thorough file inspection
12. Combustion appliance SWS testing requirement verification

The final inspection for each weatherized unit shall be performed by a certified Subgrantee QCI, or a contracted MFA approved certified QCI within 30 working-days of the final day of weatherization work being completed by agency crew(s) or contractors. Any required rework shall be completed in a timely manner and must be verified by the original inspector.

In the event an energy auditor also needs to inspect the units due to the QCI requirement, MFA's Green Initiatives Manager will inspect 10% of the completed units for that Subgrantee.

The final inspector may perform minor adjustments to previously installed retrofits in order to obtain satisfactory inspection results. Such adjustments must not exceed one working hour per unit, and will not be considered a "weatherization retrofit" as noted above.

Once completed, Subgrantees must ensure that the client filed contains a form that certifies the unit has had a final inspection, and that all work meets the required standards. The Subgrantee then uploads detailed information on each measure installed in the unit, including estimated & actual cost, energy savings and SIR into MFA’s online system. During the invoicing process, MFA's Green Initiatives Manager reviews the information on the units to determine the accuracy and technical implications of the data. If the entries raise questions or concerns, then the unit is not eligible for reimbursement until all questions and concerns are answered to MFA's satisfaction. The said units may be flagged to be included in MFA's QCI inspections.

Disciplinary actions for inadequate inspection processes determined by 100% desk monitoring or the required 5% to 10% field monitoring will first involve exploring the options of QCI re-training for the inspector. If training is not a viable option or does not remedy the problem, the inspector will not be allowed to perform inspections for a specified period, depending on the severity of the infraction, until proof of adequacy is obtained.

Page 9 / 22
Continued inspector inability or refusal to comply with policies is grounds for MFA to recommend suspension, termination, or otherwise apply special conditions to the inspector performing further QCI inspections for the program. The agency will be required to utilize other QCI inspectors to verify completed units.

During the technical monitoring process, MFA's Green Initiative Manager verifies the certificates of each QCI of the agency being monitored. The Energy$mart Academy and the Green Initiatives Manager are in communication as needed about upcoming certification expirations and the need for training review prior to re-certification.

The monitoring process also observes the procedures of the QCI during a final inspection. Suggestions, comments, best practice observations are communicated to the QCI and an official letter is sent to the agency after review.

Attached are final inspection forms, final diagnostic testing forms, and technical field monitoring forms.

V.5 Weatherization Analysis of Effectiveness

MFA qualified staff, our in-house on-line reporting system and the NM Energy$mart Academy provide long-term stability of the program. The Academy, developed in partnership with Santa Fe Community College, has earned a growing reputation as one of the premier training centers in the Weatherization Assistance Program. The Academy is IREC accredited in the four training job categories of Retrofit Installer, Crew Leader, Energy Auditor, and QCI. MFA and our partners use these pieces to enhance communication and target resources where they are needed. Enhanced communication that the systems enable will remain in place going forward and will be used to help align with the announced DOE program requirements.

In order to assess effectiveness, the NM Energy$mart Online System (System) captures the unit production data on a monthly basis. The completed unit data is captured for each agency and shows the projected energy savings in MM BTUs for each auditor in the agency. The System also has the ability to show the frequency which with each agency and auditor installs individual measures and also allows MFA to assess each Agency’s performance in a number of areas. The System-level assessment allows MFA to select individual units for inspection. A separate unit inspection database collects information from inspected units. Monitoring data follows the path of information sharing that occurs through the online system.

MFA uses the System to conduct a 100% desk audit of all units completed prior to paying Subgrantee invoices. Measures installed on each home are compared to determine the relationship between estimated costs and actual costs. SIR, total cost, and projected energy savings are tracked for each measure and for the unit as a whole. For some measures, more detailed information is collected, including R values of added insulation, Manual J calculations of new heating systems and air reductions relative to the initial blower door reading, air sealing target and the achieved reduction.

This system is also used to flag units that need additional monitoring in the form of unit inspection. Any unusual numbers, costs, or circumstances may trigger the inspection. These unit inspections become a portion of the required 5% Quality Control Inspections. During the unit inspection, the entire client file is compared to the entries for accuracy along with client interview regarding utility bill savings.

During the MFA unit inspection process of completed units, the techniques used to achieve such reductions, efficacy of installation methods, baseload measure assumptions, and other energy saving measures are observed and any findings, concerns, comments, and best practices are noted.

MFA provides the Subgrantee information on production, energy savings and measures installed during monitoring visits and during peer exchange meetings. In addition, the data generated by the System or during Technical Monitoring and Unit Inspections stimulates dialogue between agency management, MFA's Green Initiatives Manager and the NM Energy$mart Training Academy. Stakeholders can quickly determine additional training where needed. Due to the specific nature of the System’s reporting capability, specific training can be directed for specific auditors, inspectors and/or weatherization crews in order to resolve deficiencies in their skill set, and showcase best practices.

A monthly report is sent out to of the energy auditors detailing MM BTU savings, client monetary savings as average and total numbers. This will enable the team to see how they compare with others and the national number of 29.3 MM BTUs per home.

Energy Auditors are encouraged to practice the comparing of energy auditing estimates with utility bill usage. This helps the team realize how accurate their models are in comparison to actual usage and helps to spawn training where needed.

In the event Subgrantees fail final inspections; they are given the opportunity to remedy the problem within a reasonable time period. This re-work is not eligible for reimbursement. The home may be re-inspected by MFA’s QCI, depending on the nature of the failure. The training Academy is notified of the area of weakness and modifies the classes if needed. In extreme cases, additional classes are scheduled for the agency.

When there are findings or concerns that surface during inspections, the Subgrantee is asked to explain how they will improve. This may entail updating their policies and procedures, more frequent monitoring by MFA, or training to help the Subgrantee understand how the problem occurred and how to prevent it.

The costs of measures are reviewed on a regular basis prior to invoices being processed to compare with market costs of those particular measures. If something appears to be high, a detailed explanation is requested, or the agency’s procurement may be examined for that item.

Continuous progress and improvement is the goal of the combined training and monitoring programs. Through comprehensive training, staff continues to be cross trained and the basics are reviewed to widen the capabilities in addition to ensuring the existing staff understands the basics of the program on the most fundamental
levels. Technical monitoring and regular conversation helps determine additional training needs.

This program year, the NM Energy $mart Program intends to post Q and A and FAQ for Subgrantees to access to post questions, read previously answered questions, and view other questions asked by other agencies via email or phone calls. The answers to the questions, if not already located in the Technical Standards, or Administration Manual, will be reviewed by the Technical Review Committee, and will be entered into the appropriate manual and section during the normal updating process.

V.6 Health and Safety

See attached Health and Safety Plan.

V.7 Program Management

V.7.1 Overview and Organization

The New Mexico Mortgage Finance Authority (MFA) was created by the New Mexico State Legislature in 1975 as a statewide government “enterprise” to provide financing for affordable housing to medium and low-income persons and receives no money from the state to operate. MFA is governed by a board of seven members. Four members are appointed by the Governor and three members serve by virtue of their state office: the State Attorney General, the Lt. Governor and the New Mexico State Treasurer. The Chairman of the Board is appointed by the Governor. Rules and regulations formulated by the MFA are approved by a Legislative Oversight Committee of the State Legislature. The committee is comprised of eighteen members.

By Executive Order 97-01, the State Governor transferred all federally funded housing programs to MFA on January 14, 1997. The Weatherization Assistance Program (WAP) was included in this transfer. Consequently, MFA took over the administration of the WAP during the ongoing plan for 1996-97. Shortly thereafter, MFA staff produced its first plan (1997-98). MFA does not administer the State Energy Plan nor LIHEAP.

MFA has assigned significant managerial resources to the Weatherization Assistance Program to ensure its successful administration. A list of MFA personnel with direct WAP responsibilities is provided here. MFA has integrated WAP as a core activity throughout its organization; e.g. Information Technology. The whole organization is available to act on WAP activities and issues.

Weatherization Program and Support Staff:

Amy Gutierrez has been the Program Manager for the Weatherization Program since 2016. She came to the position with over 20 years of management experience with a concentration in contracts, budgets and finance. She is responsible for overall program direction and supervision of the program, leverage efforts, coordination with grantee staff, and the overall management of Subgrantees.

Troy Cucchiara is the Green Initiatives Manager and is responsible for the technical aspects of the program which include training and technical assistance as well as health and safety issues. Troy is responsible for the NM Energy$mart Program’s compliance with all DOE technical requirements. His qualifications include 10 years of field experience and he holds certificates for several areas in the field of weatherization including QCI and Multifamily QCI Certification. His responsibilities include 5.0% to 10% of file and on-site unit inspections in addition to technical monitoring.

The Program Manager and the Green Initiatives Manager will work closely together to monitor Subgrantees’ activities. They will conduct a minimum of one financial and operations monitoring visit and one technical monitoring visit per year for each agency. In addition, the team conducts 100% of desk monitoring for each invoice and unit through our online system for all funding sources. A prescribed monitoring tool is used for all monitoring visits.

The team provides training and technical assistance to our Subgrantees as needed throughout the program year.

Controller and Accountants:

Yvonne Segovia who is the Controller and five additional accountants, are responsible for reviewing Subgrantee monthly reports, preparing reimbursements, and maintaining all required financial records to account for Grantee and Subgrantee expenditures and balances. They will also be responsible for Subgrantee financial management and quarterly reporting to DOE.

Administrative Support:
The Administrative Support staff provides Marketing and Information Technology support to weatherization staff necessary to carry out the functions of the weatherization program. MFA will comply with the record keeping requirements prescribed on section 10 CFR 440.24, and with the reporting requirements on section 10 CFR 440.25.

Managers and Staff:
The Senior Managers and MFA Staff which include seven people who are responsible for the successful implementation of the program. Jay Czar and Gina Hickman provide oversight and approval of the weatherization program and provide direction to staff. Sandra Marez and Kelly Patterson provide administrative support to staff.

Isidoro Hernandez is the Deputy Director of Programs and is responsible for overall management of the weatherization program. He provides oversight and effective and efficient management of the weatherization program and provides direction to weatherization staff along with the Director of Community Development. He promotes the weatherization efforts externally.

Rose Baca-Quesada is the Director of Community Development and she is responsible for the successful implementation of the weatherization program. She provides direction to staff and promotes the weatherization efforts externally.

Gina Bell is the Assistant Director of Community Development and has extensive knowledge of the weatherization program as she managed the program for 10 years prior to her current position. She provides direction and insight to the day to day activities to the current program managers in addition to providing quality control checks on the work performed.

V.7.2 Administrative Expenditure Limits

Our admin is set at 10% total with MFA receiving 5% and the remaining 5% allocated to our Subgrantees. We will NOT be requesting the additional admin funds for our existing Subgrantees as Central New Mexico Housing Corporation, Southwestern Regional Housing and Community Development Corporation and ICAST, the newest agency, all exceed the $350,000 threshold.

V.7.3 Monitoring Activities

Monitoring Approach

MFA assists its Subgrantees with their efforts to resolve problems encountered in the administration and operation of the NM Energy$mart Program and to ensure compliance with all applicable Federal and State laws, rules, and regulations. To achieve this goal, Amy Gutierrez, the Program Manager will conduct the programmatic monitoring, and Troy Cucchiara the Green Initiatives Manager will conduct the technical monitoring. Training and technical assistance funding used for monitoring is $391 and 2% of the total monitoring budget. Administration funds used for monitoring are $16,489 and 91% of the monitoring budget. Leverage funds that will be used for monitoring are $1,350 and 7% of the monitoring budget.

The primary areas of oversight include:

- Programmatic and Management Monitoring
  - Subgrantee Review
  - Financial/Administrative
  - Policy Advisory Council (PAC)
  - Eligibility
  - Rental
  - Energy Audits
  - Field Work
  - Health & Safety
  - Equipment/Inventory/Materials
  - Grantee Monitoring
  - Training & Technical Assistance
  - Feedback & Reporting
  - Staff or entity performing the monitoring
  - How monitoring results are handled and required follow-up procedures
Subgrantee Monitoring

- Program Overview (Client File Review, Work Orders, etc.)
- Financial/Administration
- Inventory
- Energy Audits
- Qualifications & Training
- Weatherization of Units
- Health & Safety
- Quality Management Assurance
- Staff or entity performing the monitoring
- How monitoring results are handled & required follow-up procedures

Financial Monitoring

- Financial Management/Accounting Systems and Operations
- Financial Audits
- Payroll/Personnel
- Vehicles & Equipment
- Procurement
- Weatherization of Units
- Health & Safety
- Quality Management Assurance
- Staff or entity performing the monitoring
- How monitoring results are handled & required follow-up procedures

Program staff coordinates all activities and provides clear and concise direction to comply with the applicable standards and regulations. Staff conducts field monitoring of Subgrantee financial activities including financial audits, production and reporting requirements. Program staff also assists Subgrantees to improve operations through training and technical assistance to correct noted problem areas. In addition to the staff that conducts the monitoring, MFA’s Accounting Department and Internal Auditor are available when needed to review Subgrantee financial operations. Subgrantees financial audits are reviewed as part of their onsite monitoring. Financial audits are also reviewed at the time of audit submission when the financial audit is due for that year. Financial audits receive several layers of review prior to approval.

At a minimum, the staff conducts one on-site programmatic monitoring visit and one on-site technical monitoring visit each year. A comprehensive monitoring tool is used as part of a thorough review of each Subgrantee. If necessary, a follow-up monitoring visit will be conducted to verify that corrective action has been initiated or completed. Through our on-line reporting system, for a more thorough review, the staff conducts monthly checks of work done in completed units as well as financial reporting.

Staff will perform an on-site monitoring visit to Southwestern Regional Housing Community Development Corporation (SRHCDC), Central New Mexico Housing Corporation (CNMHC) and International Center for Appropriate and Sustainable Technology (ICAST) in the 2019/2020 Program Year.

In addition to the monitoring, MFA staff has developed their own QCI inspection policies. Troy Cucchiara will perform certified QCI reviews of client files and inspect the corresponding homes of 5% to 10%. This will occur on a continual basis to ensure that SWS and NM Standards are being followed, there are no missed opportunities, Health and Safety is the best approach with the best practice possible, and the quality work plan is being managed properly. In the event quality is not up to standards, and it is determined that there is a pattern, comprehensive or specific training will be scheduled to correct the issues. Health and Safety deficiencies, depending on the severity, are corrected immediately, and in some cases the same day.

Quality Control Review of units and files consists of carefully looking at every detail for each file prior to the unit visit. The file should accurately tell the story of the weatherization work that took place at the home. If one thing is out of place, it serves as an indicator to look for additional related items.

MFA also requires Subgrantees be audited in accordance with section 10 CFR 440.23(d). For program year 2018/2019 only one of the NM Energy$mart Subgrantees met the 2 CFR 200 threshold amount of $750,000.00.

To complete the approval of the annual external financial audits, the first layer of review is by the Program Manager. The second layer of review and approval is either done by the Director of MFA’s Community Development Department or MFA’s Controller.

As a follow up to each visit, MFA staff provides the Subgrantee with a written report that describes noncompliance or problem areas, suggested comments and best practices. The report is submitted to the Subgrantee within 30 days of the visit and the Subgrantee is required to respond within 30 days to MFA with a Corrective Action Plan as a formal letter that addresses any findings, concerns, and recommendations. This Corrective Action Plan must include an identified target date and time frame for each deficiency. This is tracked by an online tracking system that is referred to as Tracker. Follow up communication through phone conversations, email, and necessary onsite
visits is continual until the problem is resolved.

The Subgrantee is made aware of the monitoring instrument used for the visits, since it is accountable for implementation of the program in accordance with the standards and procedures.

In all instances, MFA is committed to working closely with Subgrantee to succeed. However, if after numerous attempts have been made towards compliance or if a Subgrantee is either unwilling or unable to resolve a non-compliance issue, MFA would start to work toward defunding the agency.

When a problem is resolved to the mutual satisfaction of the Subgrantee and MFA, MFA staff will send a follow-up letter to close the finding.

If there is any suspicion of mismanagement, fraud, waste or abuse or if any significant problems are found, MFA will immediately notify the Inspector General and DOE’s Golden Office, in Denver CO.

MFA will submit annual reports to DOE's Golden Office describing its monitoring efforts to date. The report will include at least the following:

- Number of monitoring visits to each Subgrantee;
- General nature of the findings;
- A discussion of significant corrective actions;

MFA will also have all monitoring reports available, upon request, for DOE inspection.

MFA will summarize and review its monitoring activities and findings for internal assessment of Subgrantee needs, strengths and weaknesses and annual planning. This data will be incorporated in the New Mexico Consolidated Plan and Annual Performance report.

**Credentials**

MFA staff has substantial experience in monitoring NM Energy$mart and other Federal and State programs.

The Program Manager, Amy Gutierrez, and the Green Initiatives Manager Troy Cucchiara are responsible for all NM Energy$mart related monitoring. MFA staff attends Weatherization and related training to maintain current knowledge, practices and regulations.

*Amy Gutierrez, Program Manager.* Ms. Gutierrez joined the MFA in 2016 as a Program Manager of the NM Energy$mart Weatherization Assistance Program. Prior to joining MFA, she had 20 years of management experience working as a Billing Administrator in 2 law firms. During her employment with each law firm she managed contracts, budgets and all financial business aspects of each firm.

*Troy Cucchiara is the Green Initiatives Manager* and QCI for MFA and is the technical manager for the NM Energy$mart Program. He has been involved with the home retrofit industry for 18 years and has been an integral part of the Weatherization Assistance Program for different agencies since 2006. He has earned numerous certifications including Commercial Energy Auditor, Water Specialist IV, CBI Thermographer, Lead Certified Renovator, Lead Dust Sampling Technician, AHERA, OSHA 30, Building Analyst, Building Envelope, and Home Energy Professional Quality Control Inspector, Multi-Family QCI and has been a BPI Proctor for the Santa Fe Community College. Technical experience includes energy auditing, home inspections, program management, water treatment design, inventory control, public speaking, staff training, and client education.

**Levels of Agency Performance**

High Performance or Exemplary Agencies

By way of monitoring review, an agency has demonstrated performance standards that meet or exceed standards that are commonly observed in the following areas:

**Program operations:**

No Health and Safety findings are identified in previous monitoring report.

No procedural findings related to program rules, policies or procedures.

**Fiscal:**

No annual program specific audit findings.
No material findings in the agency external audit.

**Technical:**

Provide comprehensive service utilizing the latest building science and renewable technology, in a cost-effective manner in accordance with NM Energy$mart Weatherization Assistance Program guidelines.

**Production:**

In general an agency’s production is high relative to funding.

**Qualified staff:**

Agency will receive higher credit for exemplary status with NM Energy$mart Training Academy staff through participation in the NM Energy$mart Training Plan.

**Risk:**

No “at-risk” elements are found in major categories for an agency.

If the above is met a final visit may be made by MFA NM Energy$mart staff for final confirmation of achievement.

**Stable Agency Performance:**

Typically, the frequency of monitoring will be (1) fiscal/operational visit and (1) technical visit per year by NM Energy$mart staff. The need for additional visits within the same year will be determined by the agency’s program funding and production level, and the timely responses to any outstanding monitoring findings. MFA expects every agency to meet these standards of performance:

Well-established systems for program administration and operations, with no more than one finding in the following areas:

- Compliance with major program requirements, such as, lead-based paint procedures, cost allocation.
- No more than one program specific finding in the annual monitoring visit.
- No more than one fiscal specific finding in the annual monitoring visit.
- Staff is well trained in performance of specific job duties.
- Agency has complete and organized files.
- Evidence of prudent decision making as to the use of program resources:
  - Complete scopes of work.
  - NEAT/MHEA/TREAT documentation is current and consistent with billing.
  - Staff is proficient in the use of auditing software.
  - Evidence that NEAT/MHEA/TREAT is used with actual and true pre audit data (including costs).
  - Evidence that NEAT/MHEA/TREAT is used effectively and thoughtfully in determining cost-effective measures.
  - Staff and contractors have demonstrated proficiency in technical applications, including diagnostics.
  - Agency has a minimal number of procedural findings (as related to programs rules, policies and procedures) and health and safety findings from previous monitoring report.
  - Agency complies with OSHA and MFA safety rules, as applicable.
  - The agency maintains a professional working relationship with MFA.
  - Past corrections are made and reported in a timely manner.
  - Participate in NM Energy$mart Peer Exchange meetings.
  - No “at-risk” elements are found in major categories for an agency.

**Vulnerable Agency Performance**

If an agency’s performance is deficient in some or all of the following levels of performance MFA will prepare a plan to help the agency clear the deficiencies and will provide additional monitoring within the same year:

- Has a well-established systems for program administration and operations, with no more than one finding in the following areas.
- Compliance with major program requirements such as lead-based paint procedures, cost allocation plan/indirect cost rate, required contractor information.
- No more than one program specific finding in the annual monitoring visit.
At-Risk Agency Performance

At-risk agencies may be identified as a result of a variety of factors that may include:

- Agency’s probation, i.e. an agency’s first year with the program.
- There is evidence of significant administrative or program sub-standard performance; for example, repetitive pattern of findings, failure to have copies of permits on file or lack of compliance with historical preservation rules.
- Agency is not in compliance with program policies, procedures and specifications.
- Agency has repeated health and safety findings.
- Agency staff members/crew has deficient technical skills.
- There has been a change in key staff.
- There has been a change in key weatherization Subgrantees.
- Agency has deficient scopes of work (work plan is insufficient).
- Agency has program specific audit findings.
- Agency has fiscal specific findings.
- Agency files are incomplete or disorganized.
- Agency staff is unresponsive to MFA requests and deadlines. For example, the agency consistently fails to provide monthly reports and contract closeouts in a timely manner.
- Agency production is low relative to funding.

At-risk agencies will be monitored no less than twice annually. Other factors in the frequency of monitoring visits may be based upon the requirements of specific funding sources.

V.7.4 Training and Technical Assistance Approach and Activities

Objective

Through comprehensive and specific training, MFA’s Training and Technical Assistance program will provide the weatherization staff on the Grantee and Subgrantee levels the skills needed on a regular basis to ensure a solid weatherization program with best practices and high quality workmanship.

Historically, the training has addressed the Weatherization Assistance Program from two perspectives, technical weatherization work and program management. This perspective continues to maintain a path improvement for the Program and resolve emergent issues that rise through monitoring and dialogue with Subgrantees and to prepare for Department of Energy program changes.

Comprehensive and Specific Plans

The majority of training will be occurring in the Comprehensive category as outlined in this plan. The mandatory Comprehensive training serves numerous accomplishments including review of basic Job Task Analysis material for certified individuals, updates on changes, cross training to increase capacity, and maintaining workforce credentials. Maintaining QCI certification is of particular importance as it enables compliance with 15-4.

MFA has issued an RFP for a new Subgrantee. The winner of the RFP will be expected to start Comprehensive training for three of the four Job Task Analysis the first...
All of the Comprehensive categories for Crew Leader, Installer, and Assessor will be covered during the first 18 weeks of the program year. Specific training will be issued as "ride alongs" as the agency starts to become familiar with how the work is done. There will be no completed units that do not involve the presence of someone from the training academy or another NM Energy$mart agency. All New Mexico Subgrantee's will have the opportunity to attend the classes when needed.

QCI Comprehensive training for the new agency, ICAST, will begin July 1st which is the first month of the 2020-2021 program year.

Other than the above plan for the new agency, ICAST, comprehensive training is normally offered at the beginning of every month by the Energy Smart Academy. Each agency consults with MFA prior to signing up for the classes about what would be most appropriate and based off the most recent desk monitoring, monitoring, unit inspections, or phone conversations. The comprehensive training classes are determined at least 1 month prior to scheduling the class. Follow up on agency skills and conversations happen on a continual basis.

Specific training is offered throughout the year in the form of ride along field training and as a follow up to comprehensive training, requested by each agency, or as a result of technical monitoring and QCI unit inspections. Comprehensive training will occur regularly and re-defined as once every three years for each of the positions the workers are employed.

### Comprehensive Training List

1. **Retrofit Installer**
   - Insulation 1
   - Air and Duct Sealing

2. **Crew Leader (1-4)**
   - Air and Duct Sealing
   - Insulation 2
   - Materials and Documentation
   - ASHRAE 62.2 2016

3. **Energy Auditor**
   - Basic Building Science
   - Basic Pressure Diagnostics
   - Advanced Pressure Diagnostics
   - Basic Combustion Testing
   - Intermediate Combustion Testing
   - Weatherization Assistant
   - ASHRAE 62.2 2016

4. **QCI**
   - ASHRAE 62.2 2016
   - Advanced Pressure Diagnostics
   - Advanced Combustion Analysis
   - Quality Control Inspector

**Recertifications needed:**

This program year there will be no QCI inspectors that need re-certification. However, there may be Energy Auditor certifications and testing that will be scheduled in the spring of 2019. There will also be three new QCI if the testing is passed successfully.
All Quality Control Inspections for the new agency will be contracted by the new agency (ICAST) to either the EnergySmart Academy or one of our existing Subgrantees.

**Specific Training List**

1. On site field training (ride alongs)
2. HVAC Technician
3. Project Management
4. Energy Out West Conference
5. NASCSP for new agency
6. CFR 200 or admin training for new agency

**Conference Attendance**

NASCSP, HPC, and Energy Out West conferences are allowable trainings under the NM EnergySmart Program. Agencies must use their Specific training budget for these conferences. Because of the Comprehensive majority requirement, and possible mandatory ride alongs resulting from unit inspections, agencies may be limited on the amount of specific funds available for the conferences. Therefore it is important that each agency carefully consider what staff will be attending each conference if any.

Because this is a highly sought after use of funding, it is considered a valuable commodity. Agencies are expected to obtain the full use of information gathered from the conferences. This includes attendance to all classes, updates, and sessions in addition to utilizing as much networking with other states as possible. Agencies must submit to MFA a list of who will be attending each conference and a statement that each individual will attend all classes that he or she has selected. No conference reimbursements will be released without proof of all class attendance. If an individual chooses to not attend a class or does not obtain the necessary proof of attendance, the agency may not receive full reimbursement for that individual. T and TA funds may not be used to pay for anyone attending a conference that does not attend the accompanying classes or sessions.

**Financial Management Control**

Although MFA allows and encourages Subgrantees to budget for program management training and attend DOE conferences, the comprehensive training is mandatory and pre-scheduled. This includes prescriptive training resulting from monitoring, ride alongs, financial classes, 2 CFR 200, conferences, and other program management training.

T and TA funding is closely monitored. Therefore, prior to attending a training of any kind, the Subgrantee is required to send an approval request to MFA that includes tuition and all associated costs of the training.

**Regular Comprehensive Training, Feedback from DOE Visits**

Scheduled training is determined by existing number of staff in each of the four categories, the desired number in each category, monitoring results, agency feedback, and unit inspections. The training schedule may be changed to reflect feedback from the DOE Project Officer or other monitoring visits. Contractual requirements bind Subgrantees to the training schedule, and mandate MFA allot and approve sufficient T &TA funds to cover the cost of the entire training cascade.

This approach will continue to address both core training to expand workforce capacity, advanced training to develop further specialization and leadership within the workforce, in addition to answering questions related to New Mexico’s unique housing stock and climate regions. The program embraces MFA and Subgrantee staff, and focuses on incorporating state technical standards as well as continued compliance with regulatory standards.

This training program builds on increased understanding and utilization of building science to deliver greater energy savings to client homes and ensure homes throughout the state consistently have access to the range of weatherization measures to realize maximum savings.

**Training Activities**

In order to standardize weatherization practices across the state and through all New Mexico’s Subgrantees, DOE Standard Work Specifications (SWS) have been developed. The SWS describing the weatherization process and how specific weatherization measures will be performed, have been incorporated in the customized curriculum to be made available through the IREC Accredited Weatherization Training Center (Academy) and trainers. Implementation of the SWS ensures more uniform energy savings for clients and reduced production costs for the program.

MFA works with the Academy to provide weatherization training. The Academy works with MFA and Subgrantees to develop a comprehensive training calendar each year. In addition to specific course modules, the Academy has the capability of providing specific training and even additional comprehensive training as needed in order to resolve emergent issues from MFA or DOE monitoring.

The schedule minimizes production downtime and allows sufficient opportunities for Subgrantees to complete mandatory trainings in a timely manner. The Academy provides classroom space and a well-equipped lab to optimize skills acquisition across all training levels through a combination of lecture, hands on demonstration and
| Field Training | | | | | | | | Retrofit Installer Technician | The Retrofit Installer Technician training can be taken as a series of short in-person classes, that can be scheduled around work obligations, or as a one-week in-person class, preceded by online training. The classes cover introduction to weatherization, basic math, health and safety issues, tools and maintenance, materials identification, local construction details, basic blower door, windows, doors, work scope/inventory/equipment, house as a system, basic building science, insulation and air sealing, venting and moisture, combustion safety. The in-person classes include review, hands-on lab exercises, and in-the-field work order-based weatherization activities to improve the quality and performance of a home. The classes have been designed to reinforce and extend the knowledge of building science and tools and techniques for insulating, air-sealing buildings, reducing baseload, and drywall repair, and communication skills. With a focus on performance, each student is responsible for the appropriate use of insulation blowing machines, blower doors, duct blasters, pressure pans, air-sealing props, installing baseload measures, windows, doors and bath fans, drywall repair, and combustion appliance safety testing for draft and carbon monoxide. By attending the Installer classes, the student will gain a deeper understanding about weatherization work scope, job planning, and site management. Successful completion of this course plus OSHA 10, and Lead RRP classes, makes the student eligible for SFCC certification as a Retrofit Installer Technician. Crew Leader (Steps 1 through 4) Having successfully completed the Retrofit Installer Training, students can elect to take Crew Leader classes that cover OSHA 30, the role of the crew chief, effective crew management, inventory, advanced materials and maintenance, codes, adult learning strategies, hands on diagnostics (blower door, worst case depressurization, pressure pan, basic zone pressure diagnostics), reading an audit, developing a scope of work, and additional diagnostics as needed. These classes focus on developing the skills necessary to be an effective Crew Leader, including theory, role-playing, and hands-on field exercises to prepare Crew Leaders for success in crew management, organization, inventory control, safety, understanding work orders, and quality control. In addition, participants will be discussing building codes and the State Standards for installing weatherization measures in New Mexico. Completion of this course qualifies participants for certification by SFCC as a Crew Leader. Energy Auditor The Energy Auditor series of classes prepare candidates for the BPI Home Energy Professional Energy Auditor Certification exams. This course focuses on developing the skills necessary to be an effective Energy Auditor consisting of theory, role-playing, and hands-on field exercises to prepare Energy Auditors for success in performing a comprehensive energy audit. The course covers introduction to weatherization and auditing, health and safety issues specific to weatherization, construction details, building science, equipment, basic math, code compliance, data gathering, HVAC for auditors, NEAT and MHEA, OSHA30, RRP, Lead Safe Weatherization, AHERA, ASHRAE 62.2 2016, Communication skills, Advanced NEAT and MHEA. Diagnostic tests included:  - Blower door & pressure differential  - Duct pressurization & pressure pan  - Ventilation fan flow rate  - Combustion safety (gas leaks, worse-case CAZ, spillage, draft, CO)  - HVAC assessment, temperature rise, steady state efficiency QCI Quality Control Inspector adds to the material covered in the Energy Auditor classes with material specific to inspectors – the Standard Work Specifications, Standards and Guidelines, monitoring and inspecting and the role of the inspector. This is offered online as the QCI certification is by a written exam only. Compliance With Mandatory Comprehensive Training While the Academy maintains a record of trainings attended and credentials obtained, each Subgrantee is responsible for ensuring that staff attend all required trainings for their job classification. MFA encourages Subgrantees to budget for initial training and training sufficient to maintain credentials. MFA monitors the Subgrantees for compliance. If a Subgrantee does not have sufficiently trained staff, including new staff, the agency must develop and implement a training plan sufficient to achieve compliance. In addition to prior class consultation, MFA will monitor training milestones to help support the path toward compliance. New Employment Training MFA encourages Subgrantees to hire certified staff from the network however, if that is not possible, MFA does not require Subgrantee staff to have certification prior to hiring. Each Subgrantee is required to have a training plan for each job position. Upon hire, the employee is required to complete the on-line training curriculum for their position after each agency’s individual new employee probationary period. In addition, Subgrantees must have an internal training/shadowing on the job mentoring plan. Each new staff member is responsible to attend and pass all the courses required for their job category within one year of being hired. MFA monitors
Lead-Safe Weatherization

All Subgrantees are required to be trained in LSW work practices and to attend the 8-hour training. This training includes the curriculum developed by DOE. The LSW training is a combination of classroom exercises and demonstration of tools and materials. The focus is on the practical application of LSW work practices and the inclusion of required educational materials and appropriate documentation of LSW containment procedures in all client files. Further training in Dust Sampling will be provided for more advanced crew members.

Health and Safety

Health and safety is continuously assessed and discussed throughout the year during monthly technical calls, and unit inspections. Dialogue also takes place on a weekly basis between the field staff and MFA’s technical manager with health and safety questions, comments or issues noticed from monthly reporting or day to day routine assessments. All of this communication can result in Comprehensive or Specific training that can be anything from a structured classroom setting to "ride alongs" where the instructor actually accompanies the crew on an actual job site.

Job Safety

All Subgrantee field staff will be required to complete OSHA 10 training. Crew Chiefs, Auditors and Inspectors will be required to complete OSHA 30. These courses will be construction safety courses configured to weatherization through use of Job Hazard Analysis and existing accident and injury logs of the Subgrantees.

Web Accessible Curriculum

The Online Weatherization Workforce Development Program, available in English and Spanish, will serve as a gateway into classroom training by providing core knowledge necessary to succeed in more advanced trainings. This will ensure the Academy makes efficient use of trainers and facilities. Core content of the web accessible training curriculum will be consistent with existing DOE weatherization training, customized to meet New Mexico needs in terms of climate, housing stock and policies.

Client Education

In tandem with a well trained workforce, a well-informed consumer will help make best choices in maximizing effect of weatherization measures. Understanding measures to be implemented at a home is key to garnering homeowner and occupant cooperation during installation and afterward. Therefore, a Consumer Education module has been developed along with the Online Curriculum. This module will be available to consumers through a secondary web portal, and also through a DVD that can be left at homes. The Client Education module will also be available in both English and Spanish to reach the largest portion of New Mexico population.

The SWS has been thoroughly examined for all client education points. A list of all sections that specifically spell out what needs to be delivered to the clients has been given to the Subgrantees and the Subgrantee utilization of these topics are currently part of what monitoring and unit inspections include.

Training Needs Assessment Policy

MFA closely communicates with Subgrantees on a consistent basis. The following is used to assess Subgrantee training needs:

- Subgrantee request- usually for specific training in the form of email, in person discussion during visits, phone conversations, or technical calls
- General discussion with Subgrantees
- Certifications expiration dates approaching
- New employee training needs
- Dialogue with training center after or during ride- alongs
- Desktop monitoring- monthly prior to approving invoices for payments
- Programmatic monitoring- annually administrative weaknesses are identified and suggested for training
- Quality Control Inspections- targets specific areas of concern when a pattern is established
- Technical monitoring- looks for methodic weaknesses that result in either comprehensive or specific training

This is an on-going process and communicated immediately to the Subgrantees when a training need is determined.

NM Energy$mart Exchange Meetings

In addition to the Training Program, MFA will continue to meet with Subgrantees a minimum of three times per year to discuss emergent issues. This type of communication helps maintain consistency in the services provided throughout the state. Each of these meetings will serve a core group of the weatherization workforce, in addition to including a gathering of program directors to discuss the program. These meetings will include a Program Director round table and, when necessary, staff discussion covering specific topics, including fiscal, administrative, technical, intake and client education issues.

The WAP PAC meets once a year to discuss the State Plan and other related issues.

The NM Energy$mart program also has a Technical Committee which meets monthly. The committee is composed of lead technical weatherization staff from each of the Subgrantees, technical members of MFA’s Energy$mart staff and and training academy staff. The purpose of the Technical Committee is to identify challenges and share best practice among the agencies.
Future Program Requirements

In addition to following all WAP Program Notices, MFA staff stays in close contact with NASCSP, Energy Out West, and other industry experts. Information gathered from phone meetings, conferences, emails, and updates is regularly dispersed to the Subgrantees and the Training Academy. If the industry changes or updates warrant a change in training or policies, that is implemented soon after communication or training has taken place.

Effectiveness of Energy Savings and NM Energy$mart On Line System

In order to assess effectiveness, the NM Energy$mart Online System (System) captures the unit production data on a monthly basis. The completed unit data is captured for each agency and shows the projected energy savings in MMBTUs for each auditor in the agency. This information is useful in that it can compare agency to agency, and auditor to auditor. Though the climatic conditions are vastly different from the northern part of the state to the southern, these comparisons can be helpful in determining weaknesses and individual training needs.

The System also shows the frequency with which each agency and auditor installs individual measures. It also allows MFA to assess each Agency’s performance in a number of areas. The System level assessment allows MFA to select individual units for inspection. A separate Unit Inspection database collects information from inspected units. Monitoring data follows the path of information sharing that occurs through the online system. MFA shares this information during desk audits of invoices, during monitoring and during Peer Exchange meetings.

Weatherization Plus

MFA encourages Subgrantees to coordinate the weatherization assistance program with other MFA rehabilitation programs. When applicable, this maximizes the level of assistance on eligible homes. MFA will offer Sub grantees’ training necessary for them to participate in the coordination with builders, developers and Subgrantees for MFA’s rehabilitation program.

State Weatherization Program Manuals

New Mexico’s Program Manual is divided into three parts.

- The Administrative Programmatic Manual. The manual will be updated as rules, regulation and policies change. MFA staff encourages the Subgrantees to “first” go to the manual for guidance. If their questions are not answered through the manual we then request that they call the Program Manager as a “second” level of information. This will allow for consistence guidance across the state and will also provide needed feedback from our Subgrantees if information is missing or not clear in the manual.
- The SWS Field Guide, Deck of Cards, acts as our field guide.
- NM Energy$mart Technical Standards outlines everything that is not associated to a specific measure which is addressed in the Deck of Cards.

In order to provide the Subgrantees with easy access to the current manuals, MFA has posted them on the MFA website.

Community Education

MFA will continue advertising our program, conducting education and outreach in communities across New Mexico. Staff will continue to work to educate members of New Mexico’s Public Regulatory Commission (PRC) on the NM Energy$mart Program to support future utility funding. All Subgrantees will continue distributing the required Lead Based Paint notice to all applicants. MFA will continue to require that program participants be asked to complete satisfaction forms after completion of measures.

Grantee Assessment

MFA has a technical and programmatic staff member assigned to the NM Energy$mart Program. While both employees remain in close, coordinated contact, the specialization allows each member of the team to pursue training and education sufficient to expand their understanding of the Program. The Technical Program Manager will attend NASCSP trainings, trainings related to maintaining Quality Control Inspector Certification and broader trainings related to building science, program operations and DOE rules & regulations. This includes EOW activities and other technical conferences. The programmatic staff will attend any prescribed administrative trainings, trainings, and trainings offered through DOE and NASCSP conferences.

Objective: The objective of the New Mexico disaster response plan is to implement response activities that ameliorate the effects of the disaster to affected low-income persons with due consideration to the limited funds available during the program year.

Definition: A disaster is an event or development in the State declared by a Presidential or Gubernatorial order to be either a Federal or State emergency.

Procedures: Declaration of an energy crisis enables a Subgrantee to place households affected by the crisis at the top of the weatherization waiting list. Subgrantee must follow WPN 12-7 and complete all allowed measures by the energy audit. Partial weatherization is not allowed. Once a QCI has approved the work, the crews can move to the next identified unit that qualifies.

If at all possible, the Subgrantee should complete the emergency units within the current program year.

The Subgrantees must maintain a list of the homes served during the crisis and provide the list of measures for each unit and the proposed date for full weatherization during invoice submission.

Criteria include:

1. Households must meet current income guidelines.
2. Priority will be given to elderly person, persons with disabilities, families with children, high residential energy users, and household with high energy burdens.
3. Priority will be determined through the program priority list for the particular disaster area.
4. Homes weatherized after September 30, 1994 can receive additional assistance under “Energy Crisis”.
5. Incidental repairs to an eligible dwelling will be allowed if the repairs are necessary to make the installation of weatherization materials effective.
6. Elimination of health and safety hazards will be allowed when it is necessary before the installation of weatherization materials.
